DESCRIPTION

Flakes are precision cut, resin coated chips for adding intense sparkle to custom paint jobs.

Lightning FX are vibrant, glass pearl pigments that provide extra brilliance and sparkle to custom paint jobs.

Paste Pearls are concentrated effect pigments that add a mild frosted sparkle effect to custom paint jobs.

FEATURES

FLAKES

- Brilliant, jewel-like colors
- Provides extreme effect
- Fade and solvent resistant
- Easy to apply

LIGHTNING FX

- Add to color or clear
- Highly reflective
- Adds intense sparkle in sunshine

PASTE PEARLS

- · Concentrated for easy mixing
- · Highly reflective pigments
- · Easy to create one-off colors

SUITABLE SUBSTRATES

- Basecoat
- Mix Clear
- Urethane Clearcoat
- Properly prepped OEM finish

HANDLING AND APPLICATION

PREPARATION:

OVER BASE COLORS:

Base Colors should be allowed sufficient dry time, typically 30 minutes from last coat, before applying **Paste Pearls**, **Lightning FX** or **Flakes**.

OVER OEM FINISH:

Clean OEM finish with **SEM Solve** or **Zero VOC Surface Cleaner**. Sand with 400-600 grit paper or a gray scuff pad then re-clean with **SEM Solve** or **Zero VOC Surface Cleaner**.

MIXING:

The mixing ratio for **Flakes**, **Lightning FX**, and **Paste Pearls** is based on the painter's preferences.

Flakes, Lightning FX, and Paste Pearls can be added to Mix Clear and sprayed as a fast drying base for extra control or the topcoat clear.

Note:

Always spray a test panel to insure the desired look. Lighter base colors will require more material.

RECOMMENDED STARTING POINTS:

Flakes

• 10 grams (roughly one tablespoon) per ready to spray quart Up to 100 grams for a heavy flake appearance

Lightning FX

• 10 grams (roughly two tablespoons) per ready to spray quart

Paste Pearls

• 1/4 to 1/2 tablespoon Paste Pearl per ready to spray quart

Note:

1 capful of most urethane clearcoat hardeners can be added to **Mix Clear**. This addition yields excellent early adhesion, superior chip resistance and is especially useful in multi-layered designs which result in excessive film build. Pot life is one hour when making this addition. Test compatibility before spraying and always use hardeners that meet VOC regulations for your area. If using more than 10 grams of **Flakes** per ready to spray quart, hardener must be used in **Mix Clear** or adhesion is very poor.

For best results, use a siphon-fed type gun with an agitator cup. **Flakes**, **Lightning FX**, and **Paste Pearls** will settle quickly and will build up in the gun tip when using gravity-fed type guns. When using gravity-fed type guns, be sure to shake product in the gun periodically to reduce settling and ensure even product distribution.

Always use the reducer best suited to shop conditions. Dry times may vary depending on film build, shop conditions and reducer used.

APPLICATION:

SET AIR PRESSURE TO:

Non-HVLP:	45-60 psi for	
HVLP equipment:	8-10 psi at the cap	
USE A GUN EQUIPPED W	TH:	
Paste Pearls:	1.2-1.3 fluid tip/nozzle for small projects	
	1.3-1.4 fluid tip/nozzle for large projects	
Lightning FX:	1.4 fluid tip/nozzle	
Flakes:	(mini 100 micron) 1.5-2.2 fluid tip/nozzle	
	(large 1/64") 2.2-3.0 fluid tip/nozzle	

Allow to flash, approximately 10-15 minutes between coats. Allow final coat to flash 30 minutes before applying top coat.

Note:

Use of larger fluid tip/nozzle sizes while applying **Flakes** will allow for the flakes to lay flatter on the surface, resulting in less clear needed to cover the flake.

CLEANUP:

Use appropriate cleaning materials compliant with VOC regulations in your area.

STORAGE:

Flakes, **Lightning FX**, and **Paste Pearls** should be stored in a cool, dry place with adequate ventilation away from heat, sparks and flames. The shelf life for **Paste Pearls** is 3 years when stored under normal conditions while the shelf life of **Lightning FX** and **Flakes** is unlimited.
